TABLE OF CONTENT

Chapter 1: Introduction to Natural Language Processing **01-37**
- 1.1 Fundamentals of Natural Language Processing
- 1.2 History and Evolution of NLP
- 1.3 Applications of NLP
- 1.4 Challenges in Natural Language Processing
- 1.5 NLP and Artificial Intelligence
- 1.6 NLP and Text Analytics

Chapter 2: Text Processing and Preprocessing **38-87**
- 2.1 Text Data and Its Characteristics
- 2.2 Text Collection and Data Sources
- 2.3 Text Cleaning and Normalization
- 2.4 Tokenization
- 2.5 Stop-Word Removal
- 2.6 Stemming and Lemmatization
- 2.7 Part-of-Speech Tagging
- 2.8 Handling Noisy and Unstructured Text

Chapter 3: Text Representation and Feature Engineering **88-121**
- 3.1 Text Representation Techniques
- 3.2 Bag-of-Words Model
- 3.3 Term Frequency and Inverse Document Frequency
- 3.4 N-Gram Models
- 3.5 Word Embeddings
- 3.6 Word2Vec and GloVe
- 3.7 Contextual Word Representations
- 3.8 Feature Selection for Text Analytics

Chapter 4: Linguistic Analysis and NLP Techniques **122-158**
- 4.1 Syntax and Grammar Analysis
- 4.2 Semantic Analysis
- 4.3 Named Entity Recognition
- 4.4 Dependency Parsing
- 4.5 Constituency Parsing
- 4.6 Coreference Resolution
- 4.7 Word Sense Disambiguation
- 4.8 Relationship Extraction

Chapter 5: Text Classification and Categorization **159-188**
5.1 Fundamentals of Text Classification
5.2 Rule-Based Classification
5.3 Naive Bayes Classification
5.4 Support Vector Machines
5.5 Decision Trees and Random Forests
5.6 Neural Network-Based Classification
5.7 Multi-Class and Multi-Label Classification
5.8 Evaluation of Text Classification Models

Chapter 6: Sentiment and Opinion Mining **189-226**
6.1 Introduction to Sentiment Analysis
6.2 Sentiment Classification
6.3 Aspect-Based Sentiment Analysis
6.4 Emotion Detection
6.5 Opinion Mining
6.6 Sarcasm and Irony Detection
6.7 Sentiment Analysis Applications
6.8 Challenges in Sentiment Analysis

Chapter 7: Topic Modeling and Text Mining **227-264**
7.1 Fundamentals of Text Mining
7.2 Topic Modeling Concepts
7.3 Latent Semantic Analysis
7.4 Latent Dirichlet Allocation
7.5 Non-Negative Matrix Factorization
7.6 Document Clustering
7.7 Keyword and Keyphrase Extraction
7.8 Applications of Topic Modeling

Chapter 8: Information Retrieval and Text Search **265-298**
8.1 Fundamentals of Information Retrieval
8.2 Search Engines and Text Retrieval
8.3 Indexing and Query Processing
8.4 Ranking and Relevance
8.5 Semantic Search
8.6 Question Answering Systems
8.7 Information Extraction
8.8 Text Summarization

Chapter 9: Deep Learning for NLP **299-327**
9.1 Introduction to Deep Learning in NLP
9.2 Artificial Neural Networks
9.3 Recurrent Neural Networks
9.4 Long Short-Term Memory Networks
9.5 Gated Recurrent Units
9.6 Convolutional Neural Networks for Text
9.7 Attention Mechanisms
9.8 Transformer Architecture

Chapter 10: Large Language Models and Generative NLP **328-360**
10.1 Introduction to Large Language Models
10.2 Transformer-Based Language Models
10.3 BERT and Its Variants
10.4 GPT-Based Models
10.5 Pretraining and Fine-Tuning
10.6 Prompt Engineering
10.7 Retrieval-Augmented Generation
10.8 Applications and Limitations of Large Language Models
