

CONTENTS

Chapter 1: Introduction to Cloud Computing and Data Science	01-33
1.1 Fundamentals of Cloud Computing	
1.2 Evolution of Data Science	
1.3 Cloud Service Models	
1.4 Cloud Deployment Models	
1.5 Benefits and Challenges of Cloud Adoption	
1.6 Cloud Platforms for Data Science	
Chapter 2: Cloud Infrastructure and Virtualization	34-70
2.1 Data Center Architecture	
2.2 Virtual Machines and Hypervisors	
2.3 Containerization Technologies	
2.4 Kubernetes and Container Orchestration	
2.5 Resource Allocation and Management	
2.6 Infrastructure as Code	
Chapter 3: Cloud Storage and Data Management	71-107
3.1 Cloud Storage Fundamentals	
3.2 Object, Block, and File Storage	
3.3 Distributed File Systems	
3.4 Data Lakes and Data Warehouses	
3.5 Data Integration Techniques	
3.6 Backup and Disaster Recovery	
Chapter 4: Big Data Processing in the Cloud	108-147
4.1 Big Data Characteristics	
4.2 Hadoop Ecosystem	
4.3 Apache Spark Framework	
4.4 Distributed Data Processing	
4.5 Stream Processing Systems	
4.6 Performance Optimization	

Chapter 5: Data Engineering and Analytics Pipelines	148-188
5.1 Data Collection Methods	
5.2 ETL and ELT Processes	
5.3 Workflow Automation	
5.4 Data Quality Management	
5.5 Analytical Processing Techniques	
5.6 Visualization and Reporting	
 Chapter 6: Machine Learning Infrastructure in the Cloud	 189-229
6.1 Cloud-Based Machine Learning Platforms	
6.2 Model Training and Validation	
6.3 GPU and TPU Computing	
6.4 Model Deployment Strategies	
6.5 MLOps Fundamentals	
6.6 Monitoring and Maintenance	
 Chapter 7: Security, Privacy, and Governance	 230-270
7.1 Cloud Security Principles	
7.2 Identity and Access Management	
7.3 Data Privacy Regulations	
7.4 Encryption Techniques	
7.5 Risk Assessment and Compliance	
7.6 Governance Frameworks	
 Chapter 8: Emerging Trends and Future Directions	 271-310
8.1 Edge Computing for Data Science	
8.2 Serverless Computing	
8.3 Federated Learning	
8.4 AI-Driven Cloud Management	
8.5 Multi-Cloud and Hybrid Cloud Strategies	
8.6 Future Research Directions
