

TABLE OF CONTENTS

Chapter No.	Title	Page No.
1	Introduction to Python • History and Features of Python • Installing Python and IDE Setup • Writing Your First Program • Python Execution Modes • Python Architecture • Applications of Python • Advantages and Limitations of Python	01-39
2	Python Fundamentals • Variables and Data Types • Input and Output Functions • Operators and Expressions • Type Conversion • Comments and Indentation • Basic Programming Practice and Problem Solving • Expressions, Statements, and Code Blocks • Coding Standards, Programming Style, and Best Practices	40-81
3	Decision Making and Loops • if, if-else, and Nested Conditions • for and while Loops • break, continue, and pass Statements • Practical Programming Examples • Loop Applications • Nested Loops and Pattern Programming • Nested Loops • Looping Through Data Structures	82-123
4	Strings, Lists, Tuples, and Dictionaries • String Manipulation • List Operations • Tuples and Sets • Dictionary Methods	124-148

	• Dictionaries and Dictionary Operations • Collection Operations, Best Practices, and Real-World Applications	
5	Functions and Modules • Defining Functions • Arguments and Return Values • Lambda and Recursive Functions • Modules and Packages • Function Scope, Built-in Functions, and Best Programming Practices • Functional Programming Techniques and Real-World Applications	149-177
6	File Handling and Exception Handling • Reading and Writing Files • Working with CSV and JSON • Error Types • Try-except-finally Blocks • Logging, Debugging, and Best Practices in File and Exception Handling • Mini Projects and Case Studies in File and Exception Handling	178-204
7	Object-Oriented Programming in Python • Classes and Objects • Constructors • Inheritance • Polymorphism and Encapsulation • Advanced Object-Oriented Programming Concepts and Real-World Applications • Object-Oriented Design Patterns, UML Modeling, and Industrial Case Studies	205-235
8	Advanced Python Concepts • Iterators and Generators • Decorators • List Comprehensions • Multithreading Basics	236-262

	• Asynchronous Programming, Performance Optimization, and Real-World Applications • Advanced Python Project Development and Industry Case Studies	
9	Python Libraries and Applications	263-288
	• NumPy Fundamentals • Pandas for Data Analysis • Matplotlib for Visualization • Database Connectivity • Integrated Python Library Projects and Best Practices • Emerging Python Libraries, Deployment, and Future Trends	
10	Real-World Projects and Best Practices	289-319
	• Web Scraping • Automation Scripts • Mini Projects • PEP 8 Coding Standards • Testing and Debugging • Capstone Projects, Career Readiness, and Future Learning	
11	Introduction to AI and Machine Learning with Python	320-338
	• Introduction to Artificial Intelligence and Machine Learning • Python Libraries for Artificial Intelligence and Machine Learning • Machine Learning Workflow • Types of Machine Learning • Real-World Examples and Case Studies
