

CONTENTS

Chapter 1 - Foundations of Fuzzy Mathematics and Uncertainty	01-34
1.1 Introduction to Uncertainty and Imprecision	
1.2 Crisp and Fuzzy Concepts	
1.3 Classical Sets and Set Operations	
1.4 Classical Relations and Logical Foundations	
1.5 Vagueness, Ambiguity and Randomness	
1.6 Limitations of Classical Mathematical Models	
1.7 Approximate Reasoning and Computational Intelligence	
1.8 Historical Development of Fuzzy Set Theory	
1.9 Applications of Fuzzy Mathematics	
Chapter 2 - Fuzzy Sets and Membership Function Modeling	35-61
2.1 Fundamentals and Representation of Fuzzy Sets	
2.2 Membership Functions and Their Characteristics	
2.3 Support, Core, Boundary and Height	
2.4 Normal, Subnormal and Convex Fuzzy Sets	
2.5 Alpha-Cuts and Strong Alpha-Cuts	
2.6 Equality, Subsethood and Cardinality of Fuzzy Sets	
2.7 Fuzzy Set Operations and Algebraic Properties	
2.8 Linguistic Variables, Hedges and Fuzzy Modifiers	
2.9 Membership Function Models and Applications	
Chapter 3 - Fuzzy Relations, Fuzzy Numbers and Arithmetic	62-99
3.1 Cartesian Products and Fuzzy Relations	
3.2 Properties of Fuzzy Binary Relations	
3.3 Fuzzy Equivalence and Compatibility Relations	
3.4 Composition of Fuzzy Relations	
3.5 Max-Min and Max-Product Composition	
3.6 Fundamentals of Fuzzy Numbers	
3.7 Triangular and Trapezoidal Fuzzy Numbers	
3.8 Arithmetic Operations on Fuzzy Numbers	
3.9 Extension Principle and Fuzzy Equations	
Chapter 4 - Fuzzy Logic and Approximate Reasoning	100-129
4.1 Classical Logic and Multi-Valued Logic	
4.2 Fundamentals of Fuzzy Logic	
4.3 Fuzzy Propositions and Linguistic Propositions	
4.4 Fuzzy Truth Values and Predicates	
4.5 Fuzzy Logical Operators	
4.6 T-Norms, T-Conorms and Fuzzy Implications	
4.7 Compositional Rule of Inference	

4.8 Generalized Modus Ponens and Modus Tollens	
4.9 Fuzzy IF-THEN Rules and Approximate Reasoning	
Chapter 5 - Fuzzy Inference Systems and Intelligent Control	130-155
5.1 Architecture of Fuzzy Inference Systems	
5.2 Knowledge Base, Database and Rule Base	
5.3 Fuzzification Methods and Techniques	
5.4 Fuzzy Rule Evaluation and Aggregation	
5.5 Defuzzification Methods	
5.6 Mamdani Fuzzy Inference Model	
5.7 Takagi-Sugeno and Tsukamoto Models	
5.8 Comparative Analysis of Fuzzy Inference Methods	
5.9 Fuzzy Controller Design and Applications	
Chapter 6 - Fuzzy Decision Making, Ranking and Clustering	156-182
6.1 Decision Making under Uncertainty	
6.2 Fuzzy Preference Relations	
6.3 Ranking and Similarity Measures for Fuzzy Numbers	
6.4 Fuzzy Multi-Criteria Decision Making	
6.5 Fuzzy Analytic Hierarchy Process	
6.6 Fuzzy TOPSIS and Decision Support	
6.7 Fuzzy Pattern Classification	
6.8 Fuzzy C-Means Clustering and Cluster Validation	
6.9 Engineering and Management Applications of Fuzzy Decision Making	
Chapter 7 - Soft Computing and Artificial Neural Networks	183-210
7.1 Fundamentals and Characteristics of Soft Computing	
7.2 Hard Computing versus Soft Computing	
7.3 Computational Intelligence and Intelligent Systems	
7.4 Biological and Artificial Neural Networks	
7.5 Mathematical Neuron Models and Activation Functions	
7.6 Neural Network Architectures and Learning Paradigms	
7.7 Perceptron and Multilayer Feed-Forward Networks	
7.8 Backpropagation, RBF Networks and Self-Organizing Maps	
7.9 Applications of Neural Networks in Intelligent Systems	
Chapter 8 - Evolutionary Computation and Genetic Algorithms	211-244
8.1 Fundamentals of Optimization and Evolutionary Computation	
8.2 Biological Evolution and Natural Selection	
8.3 Principles and Architecture of Genetic Algorithms	
8.4 Chromosome Representation and Population Initialization	
8.5 Fitness Functions and Selection Strategies	
8.6 Crossover and Mutation Operators	
8.7 Elitism, Termination and Constraint Handling	

8.8 Multi-Objective Optimization and Pareto Optimality

8.9 Engineering Applications of Genetic Algorithms

Chapter 9 – Hybrid Soft Computing and Neuro-Fuzzy Systems **245-287**

9.1 Fundamentals of Hybrid Intelligent Systems

9.2 Integration of Fuzzy Logic and Neural Networks

9.3 Architecture of Neuro-Fuzzy Systems

9.4 Adaptive Neuro-Fuzzy Inference Systems

9.5 Learning Mechanisms in ANFIS

9.6 Genetic-Fuzzy and Genetic-Neural Systems

9.7 Evolutionary Optimization of Fuzzy Systems

9.8 Hybrid Intelligent Decision Support Systems

9.9 Applications and Performance Evaluation of Hybrid Systems

Chapter 10 – Applications and Emerging Trends in Soft Computing **288-314**

10.1 Intelligent Control and Automation Applications

10.2 Renewable-Energy Forecasting and Management

10.3 Healthcare, Medical Diagnosis and Decision Support

10.4 Agricultural and Environmental Decision Systems

10.5 Image Processing, Classification and Pattern Recognition

10.6 Financial Risk Assessment and Prediction

10.7 Supply-Chain, Industrial and Smart Manufacturing Applications

10.8 Smart-City and Sustainable Intelligent Systems

10.9 Emerging Trends and Future Directions in Fuzzy and Soft Computing
