CONTENT

Chapter 1: Introduction to Real-Time Data Analytics 1-13
1.1 Evolution of Data Analytics
1.2 Batch vs Near Real-Time vs Real-Time Analytics
1.3 Characteristics of Real-Time Systems
1.4 Role of AI in Modern Analytics
1.5 Industry Use Cases (IoT, Finance, Smart Cities, Healthcare)
1.6 Challenges: Latency, Scalability,Reliability

Chapter 2: Fundamentals of Data Streams 14-28
2.1 Data Stream Models
2.2 Event Time vs Processing Time
2.3 Stream Ordering and Late Arriving Data
2.4 Windowing Concepts (Tumbling, Sliding,Session)
2.5 Stream Processing Semantics (Exactly-once, At-least-once)
2.6 Data Quality in Streams

Chapter 3: Data Collection and Ingestion 29-52
3.1 Real-Time Data Sources (Sensors, Logs,Clickstreams)
3.2 APIs, Webhooks and Message Queues
3.3 Apache Kafka Architecture
3.4 Data Serialization (JSON, Avro, Protobuf)
3.5 Fault Tolerance and Backpressure Handling
3.6 Data Validation and Preprocessing

Chapter 4: Real-Time Data Processing Architectures 53-72
4.1 Lambda Architecture
4.2 Kappa Architecture
4.3 Event-Driven Architecture
4.4 Microservices-based Streaming Systems
4.5 Stateful vs Stateless Processing
4.6 Design Trade-offs and Best Practices

Chapter 5: Streaming Frameworks and Tools 73-96
5.1 Apache Kafka Streams
5.2 Apache Spark Structured Streaming
5.3 Apache Flink Concepts
5.4 Stream Joins and Aggregations
5.5 State Management and Checkpointing
5.6 Performance Optimization Techniques

Chapter 6: AI and Machine Learning for Real-Time Analytics 97-116
6.1 Introduction to Online and Incremental Learning
6.2 Real-Time Feature Engineering
6.3 Streaming Classification and Regression
6.4 Concept Drift Detection
6.5 Real-Time Anomaly Detection
6.6 Model Serving and Inference Pipelines

Chapter 7: Real-Time Analytics, Visualization and Monitoring 117-137
7.1 Time-Series Data Analytics
7.2 Real-Time Dashboards and Visualization Tools
7.3 Alerting and Notification Systems
7.4 KPI Definition and Tracking
7.5 Log Analytics and Metrics Collection
7.6 Observability in Streaming Systems

Chapter 8: Data Governance, Security and Ethics 138-154
8.1 Data Privacy and Compliance (GDPR basics)
8.2 Security in Streaming Pipelines
8.3 Encryption and Access Control
8.4 Ethical Issues in AI-driven Analytics
8.5 Bias and Fairness in Real-Time AI
8.6 Responsible AI Practices

Chapter 9: Deployment, Scaling and Cloud Integration **155-172**
9.1 Containerization with Docker
9.2 Kubernetes for Streaming Applications
9.3 Auto-scaling and Load Balancing
9.4 Cloud Streaming Services (AWS, Azure, GCP overview)
9.5 CI/CD for Data Pipelines
9.6 Cost Optimization Strategies

Chapter 10: Case Studies and Project **173-190**
10.1 Industry Case Studies
10.2 Design of End-to-End Real-Time Analytics Pipeline
10.3 Integration of AI Models with Streaming Data
10.4 Performance Evaluation and Optimization
10.5 Mini/Capstone Project
10.6 Documentation and Presentation
