

TABLE OF CONTENTS

Unit No.	Title	Page No.
1	Evolution and Philosophy of Intelligence 1.1 Historical Evolution of Artificial Intelligence 1.2 Philosophy and Theories of Intelligence 1.3 Cognitive Science and Computational Thinking 1.4 Human Intelligence vs Machine Intelligence 1.5 Research Paradigms in Artificial Intelligence	1
2	Mathematical Foundations for Artificial Intelligence 2.1 Linear Algebra and Vector Spaces 2.2 Probability Theory and Bayesian Inference 2.3 Statistics for Machine Learning 2.4 Optimization Techniques and Algorithms 2.5 Information Theory and Entropy Models	15
3	Advanced Machine Learning Techniques 3.1 Supervised Learning and Predictive Models 3.2 Unsupervised and Semi-Supervised Learning 3.3 Reinforcement Learning and Decision Systems 3.4 Ensemble, Transfer, and Meta Learning 3.5 Model Evaluation and Experimental Design	41
4	Deep Learning and Neural Computation 4.1 Foundations of Neural Networks 4.2 Convolutional Neural Networks 4.3 Recurrent Neural Networks and LSTM 4.4 Transformer Models and Attention Mechanisms 4.5 Deep Learning Optimization Strategies	64
5	Natural Language Processing and Generative AI 5.1 Computational Linguistics and Text Processing 5.2 Large Language Models and Foundation Models 5.3 Conversational AI and Chatbot Systems 5.4 Multimodal and Multilingual AI 5.5 Ethical Issues in Generative AI	86
6	Computer Vision and Perception Systems 6.1 Digital Image Processing Fundamentals 6.2 Object Detection and Recognition 6.3 Video Analytics and Pattern Recognition 6.4 Biometric and Facial Recognition Systems 6.5 Vision Systems for Autonomous Machines	107

7	Big Data and Intelligent Data Engineering 7.1 Data Collection and Preprocessing 7.2 Feature Engineering and Representation Learning 7.3 Big Data Platforms for AI 7.4 Data Visualization and Knowledge Discovery 7.5 Data Governance and Security	127
8	Explainable AI and Human-Centered Intelligence 8.1 Explainable and Interpretable AI Models 8.2 Trustworthy and Responsible AI 8.3 Human-AI Interaction and Collaboration 8.4 Cognitive Computing and Decision Support 8.5 Emotion AI and Behavioural Analytics	143
9	AI Applications Across Domains 9.1 AI in Healthcare and Medical Systems 9.2 AI in Finance and Business Analytics 9.3 AI in Smart Cities and Agriculture 9.4 AI in Robotics and Automation 9.5 AI in Education and Research	160
10	Ethics, Policy, and Governance in AI 10.1 Ethical Principles and Frameworks 10.2 Bias, Fairness, and Accountability 10.3 Privacy and Data Protection 10.4 Global AI Policies and Regulations 10.5 Sustainable and Responsible AI	175
11	Emerging Technologies in Artificial Intelligence 11.1 Artificial General Intelligence 11.2 Quantum Computing and AI 11.3 Edge AI and Internet of Things 11.4 Autonomous and Self-Learning Systems 11.5 AI and Future Societal Transformations	187
12	Research Directions and Future Intelligence 12.1 AI Research Methodologies 12.2 Experimental Design and Validation 12.3 Innovation and AI Startup Ecosystem 12.4 Open Research Challenges 12.5 Future Vision of Intelligent Systems	199
