CONTENTS

Chapter No.	Title	Page No.
1	**Foundations of Machine Intelligence** Introduction to Machine Intelligence and Smart Systems Human vs Machine Decision-Making Cognitive Computing Fundamentals Applications Across Domains	01 - 17
2	**Mathematical Foundations** Linear Algebra Basics Probability and Statistics Essentials Optimization Techniques Cost Functions and Error Metrics	18 - 33
3	**Machine Learning Fundamentals** Supervised Learning Algorithms Unsupervised Learning Principles Semi-Supervised and Self-Supervised Models Overfitting, Underfitting, and Model Validation	34 - 50
4	**Neural Networks and Deep Learning** Artificial Neural Networks Architecture Activation Functions and Backpropagation Convolutional and Recurrent Networks Deep Learning Applications	51 – 68
5	**Feature Engineering and Data Preprocessing** Data Cleaning and Transformation Feature Extraction and Selection Handling Missing Data and Outliers Dimensionality Reduction Techniques	69 - 88
6	**Predictive Modeling Techniques** Regression Models Classification Models Time-Series Forecasting Model Interpretation and Explainability	89 - 109
7	**Advanced Machine Intelligence Methods** Reinforcement Learning Basics Transfer Learning Concepts Ensemble Learning Techniques Hybrid Intelligent Systems	110 – 130

8	**Big data analytics and modeling pipelines**	**131 - 156**
	Big Data Tools and Frameworks	
	Data Pipelines and Workflows	
	Cloud-Based Model Deployment	
	Real-Time Analytics	
9	**Evaluation, Validation, and Optimization**	**157 - 170**
	Cross-Validation Strategies	
	Hyperparameter Tuning	
	Bias–Variance Tradeoff	
	Model Performance Optimization	
10	**Applications and Future Trends**	**171 - 191**
	AI in Healthcare, Finance, and Industry	
	Ethical Considerations in Machine Intelligence	
	Autonomous Systems and Smart Environments	
	Future Research Directions	
	Gate Questions	**192 - 195**
