

# TABLE OF CONTENTS

<b>Unit 1: Foundations of Zero Incidents Philosophy</b>	<b>01-27</b>
1.1 Concept of Zero Harm / Zero Incidents mindset	
1.2 Difference between reactive vs proactive safety models	
1.3 High Reliability Organizations (HROs)	
1.4 Safety culture evolution	
1.5 Cost of incidents in engineering systems	
1.6 Case studies: aviation safety evolution, industrial disasters	
1.7 Organizational Safety Leadership & Governance	
1.8 Integrated Zero Incident Framework	
<b>Unit 2: Systems Thinking &amp; Risk Architecture</b>	<b>28-45</b>
2.1 Systems engineering principles	
2.2 Complex adaptive systems	
2.3 Hazard identification and system boundaries	
2.4 Risk taxonomy (technical, human, environmental, cyber)	
2.5 Feedback loops and failure propagation	
<b>Unit 3: Reliability Engineering &amp; Fault Tolerance</b>	<b>46-68</b>
3.1 Reliability metrics (MTBF, MTTR, failure rate)	
3.2 Redundancy design strategies (N+1, 2N systems)	
3.3 Fault detection, isolation, and recovery (FDIR)	
3.4 Fail-safe and fail-operational systems	
3.5 Resilience engineering principles	
3.6 Case study: aerospace redundancy systems	
3.7 Advanced Fault-Tolerant Design Patterns	
<b>Unit 4: Safety Engineering &amp; Hazard Control</b>	<b>69-81</b>
4.1 Hazard analysis techniques (HAZOP, FMEA, FTA)	
4.2 Layered safety models (Swiss cheese model)	
4.3 Safety-critical system design	
4.4 Interlocks, safeguards, and protective systems	
<b>Unit 5: Secure-by-Design &amp; Cyber Risk Prevention</b>	<b>82-98</b>
5.1 Security vs safety distinction	
5.2 Secure system architecture principles	
5.3 Threat modeling (STRIDE, attack trees)	
5.4 Zero Trust architecture fundamentals	

- 5.5 Secure coding and DevSecOps integration
- 5.6 Cyber-physical system risks (IoT, SCADA)

**Unit 6: Human Factors & Organizational Safety** **99-113**

- 6.1 Human error classification (slips, lapses, violations)
- 6.2 Cognitive overload and system usability
- 6.3 Ergonomic system design
- 6.4 Safety culture in organizations
- 6.5 Training, compliance, and behavioral safety

**Unit 7: Monitoring, Prediction & Incident Prevention Analytics** **114-129**

- 7.1 Real-time monitoring systems
- 7.2 Predictive maintenance using AI/ML
- 7.3 Anomaly detection techniques
- 7.4 Digital twins for safety simulation
- 7.5 Incident forecasting models
- 7.6 Observability in complex systems

**Unit 8: Zero Incident System Design Project** **130-151**

- 8.1 End-to-end system design project
- 8.2 Designing a zero-failure architecture (any domain: transport, IT, healthcare)
- 8.3 Risk assessment report
- 8.4 Safety validation and simulation
- 8.5 Audit and compliance documentation
- 8.6 Presentation of "Zero Incident Blueprint"
